GET AHEAD OF THE COMPETITION WITH OUR HOT PRODUCTS MONTHLY EBLASTS!

**EOS SYSTEMS INC.** has introduced new photogrammetry software designed specifically for photographs taken with drones. The **PhotoModeler UAS 2016** software creates 3D models, measurements and maps from photographs taken with ordinary cameras built in or mounted on drones. It includes numerous features for optimized operation with drone photos, including post-processing kinematics (PPK), volume objects, full geographic coordinate systems support, multispectral image support and control point assist. The new version of PhotoModeler is suited for drone photogrammetry applications including surveying, ground contouring, surface model creation, stock pile volume measurement, mining and mine reclamation, environmental analysis, slope analysis, forensic analysis, construction, and agricultural crop analysis. [photomodeler.com](http://photomodeler.com)

**THINKBOX SOFTWARE** has released **Sequoia**, a powerful standalone point mesher. Running on both Microsoft Windows and Mac OS X platforms, Sequoia converts point cloud data from laser scanners, photogrammetry and other sources to geometry quickly and efficiently. Leveraging out-of-core asynchronous parallel processing, Sequoia easily handles large datasets exceeding system memory on a wide range of hardware including tablets, laptops and graphics workstations. Through its native integration with Thinkbox's Deadline compute management solution, Sequoia can also perform distributed processing using local network or cloud resources. For enhanced visualizations, 3D meshes can be textured through image projections. [thinkboxsoftware.com](http://thinkboxsoftware.com)

At Intergo 2016, **ZOLLER + FRÖHLICH** unveiled a new generation of laser scanners for surveyors. The new **Z+F Imager 5016 series** includes all powerful features of the 5010 series, including an integrated high-definition HDR camera and the indoor and outdoor positioning system. The design is completely new. Aside from the better grip on the basis of the ergonomic streamline design, setup with high tripods and overhead applications are much easier. In addition, the Z+F Imager 5016 is 30 percent smaller and lighter than the Z+F Imager 5010X. Due to innovative developments, the maximum range of the new Z+F Imager 5016 has been extended to up to 360 meters (1,180 feet), helping establish new opportunities and applications.
